Hello,

On September 1, 2016, we announced that we will be implementing an [ongoing process](#) of evaluating and removing apps that no longer function as intended, don't follow current review guidelines, or are outdated.

We noticed that your app has not been updated in a significant amount of time.

**Next Steps**

To keep your app on the App Store, submit an updated version for review and make sure it follows the latest App Review Guidelines. If you are unable to submit an update within 30 days, your app will be removed from the App Store until you submit an update, and it is approved.

**If Your App is Removed**

Your app will remain fully functional for current users. They will experience no interruption to services, will still be able to buy in-app purchases, and can re-download the app while restoring from an iCloud or iTunes backup. However, we recommend that you update your app as soon as possible to reinstate it on the App Store and ensure that it remains functional and engaging for new and existing customers.

You can continue to use your current app name, as your app has not been deleted from your account. However, please note that if your app name is longer than 50 characters, you will need to modify it to meet current naming guidelines.

The TestFlight version of this app will also be unavailable for external and internal testing and all public TestFlight links will no longer be functional until the production version of your app is submitted for review and approved.

**Additional Information**

Learn more about changes to the App Store and keeping your apps up-to-date.
